Gui mit wxDemo

The screenshot shows the wxPython Demo application window. The title bar reads "wxPython: (A Demonstration)". The menu bar includes File, Demo, Options, and Help. A toolbar labeled "wxPython Demos" is visible. On the left, a tree view titled "wxPython Overview" lists categories like "Recent Additions/Updates", "Frames and Dialogs", "Common Dialogs", "More Dialogs", and "Core Windows/Controls". Under "Core Windows/Controls", items like BitmapButton, Button, CheckBox, etc., are listed. A search bar at the bottom left says "Filter Demos: Search". The main content area has tabs for "wxPython Overview" (selected) and "Demo Code". The "wxPython Overview" tab contains a section titled "wxPython" which describes it as a GUI toolkit for Python, implemented as a Python extension module. It mentions wxWindows, Open Source status, and cross-platform support for Windows, Unix, and Mac OS X. Below this, a "Demo Log Messages" panel shows log entries from 17:49:51 to 17:50:38, including "OnActivate: True" and "OnAppActivate: False". The footer of the window says "Welcome to wxPython 4.0.4".

wxPython Overview Demo Code

wxPython

wxPython is a **GUI toolkit** for the Python programming language. It allows Python programmers to create programs with a robust, highly functional graphical user interface, simply and easily. It is implemented as a Python extension module (native code) that wraps the popular wxWindows cross platform GUI library, which is written in C++.

Like Python and wxWindows, wxPython is **Open Source** which means that it is free for anyone to use and the source code is available for anyone to look at and modify. Or anyone can contribute fixes or enhancements to the project.

wxPython is a **cross-platform** toolkit. This means that the same program will run on multiple platforms without modification. Currently supported platforms are 32-bit Microsoft Windows, most Unix or unix-like systems, and Macintosh OS X. Since the language is Python, wxPython programs are **simple, easy** to write and easy to understand.

This **demo** is not only a collection of test cases for wxPython, but is also designed to help you learn about and how to use wxPython. Each sample is listed in the tree control on the left. When a sample is selected in the tree then a module is loaded and run (usually in a tab of this notebook,) and the source code of the module is loaded in another tab for you to browse and learn from.

Demo Log Messages

```
17:49:51: OnActivate: True  
17:50:26: OnActivate: False  
17:50:26: OnAppActivate: False  
17:50:38: OnAppActivate: True  
17:50:38: OnActivate: True
```

Welcome to wxPython 4.0.4

Gui mit wxDemo

The screenshot shows the wxPython Demo application window. The title bar reads "wxPython: (A Demonstration)". The menu bar includes "File", "Demo", "Options", and "Help". The main window has tabs at the top: "Frame Overview", "Demo Code", and "Demo". The "Demo" tab is selected, displaying the text "Create and Show a Frame". On the left, a tree view titled "wxPython Overview" lists categories like "Recent Additions/Updates", "Frames and Dialogs", "Common Dialogs", "More Dialogs", and "Core Windows/Controls". Under "Core Windows/Controls", various wxPython controls are listed with small icons. At the bottom, there's a "Demo Log Messages" panel showing log entries:

```
18:29:58: OnAppActivate: False  
18:30:04: OnAppActivate: True  
18:30:04: OnActivate: True  
18:30:05: OnActivate: False  
18:30:05: OnAppActivate: False  
18:30:16: OnAppActivate: True  
18:30:16: OnActivate: True
```

At the bottom left, there's a "Filter Demos:" dropdown and a search bar with a magnifying glass icon and a clear button. The footer says "Welcome to wxPython 4.0.4".

Welcome to wxPython 4.0.4

Gui mit wxDemo

The screenshot shows the wxPython Demo application interface. On the left, there's a tree view titled "wxPython Overview" listing various wxPython components like Simplebook, LEDNumberCtrl, DynamicSashWindow, TreeListCtrl, and many Frame and Dialog-related items. Below the tree view is a search bar with a magnifying glass icon and a "Search" button.

The main area contains a code editor window. At the top of the code editor are tabs for "Frame Overview", "Demo Code", and "Demo". The "Demo Code" tab is selected. Below the tabs are buttons for "Active Version: Original" (selected), "Modified", "Save Changes", and "Delete Modified".

The code editor displays the following Python code:

```
5  #
6
7  class MyFrame(wx.Frame):
8      def __init__(self, parent, ID, title, pos=wx.DefaultPosition,
9          size=wx.DefaultSize, style=wx.DEFAULT_FRAME_STYLE
10         ):
11
12
13     wx.Frame.__init__(self, parent, ID, title, pos, size, style)
14     panel = wx.Panel(self, -1)
15
16     button = wx.Button(panel, 1003, "Close Me")
17     button.SetPosition((15, 15))
18     self.Bind(wx.EVT_BUTTON, self.OnCloseMe, button)
19     self.Bind(wx.EVT_CLOSE, self.OnCloseWindow)
20
21
22     def OnCloseMe(self, event):
23         self.Close(True)
24
25     def OnCloseWindow(self, event):
26         self.Destroy()
27
28 #
```

At the bottom of the code editor, there's a "Demo Log Messages" section showing the following log entries:

```
18:31:52: OnAppActivate: False
18:31:52: OnAppActivate: True
18:31:52: OnActivate: True
18:31:53: OnActivate: False
18:31:53: OnAppActivate: False
18:32:02: OnAppActivate: True
18:32:02: OnActivate: True
```

The bottom of the application window displays a welcome message: "Welcome to wxPython 4.0.4".

Gui mit wxDemo

```
import wx

### -----
class MyFrame(wx.Frame):
    def __init__(self, parent, ID, title, pos=wx.DefaultPosition,
                 size=wx.DefaultSize, style=wx.DEFAULT_FRAME_STYLE):
        ...

        ... (siehe Bild)

    def OnCloseMe(self, event):
        self.Close(True)

    def OnCloseWindow(self, event):
        self.Destroy()

### -----
if __name__ == '__main__':
    app=wx.App()
    fenster=MyFrame(None, -1, "Fenster")
    app.SetTopWindow(fenster)
    fenster.Show(True)
    app.MainLoop()
```

Welcome to wxPython 4.0.4

Gui mit wxDemo

The screenshot shows the wxPython Demo application window. The title bar reads "wxPython: (A Demonstration)". The menu bar includes "File", "Demo", "Options", and "Help". The "wxPython Demos" panel on the left lists various wxPython controls with icons, and "Menu" is selected. The main panel displays a button labeled "Show the Menu sample". A large "wx.Menu" watermark is overlaid on the center of the screen. The bottom panel shows "Demo Log Messages" with the following log entries:

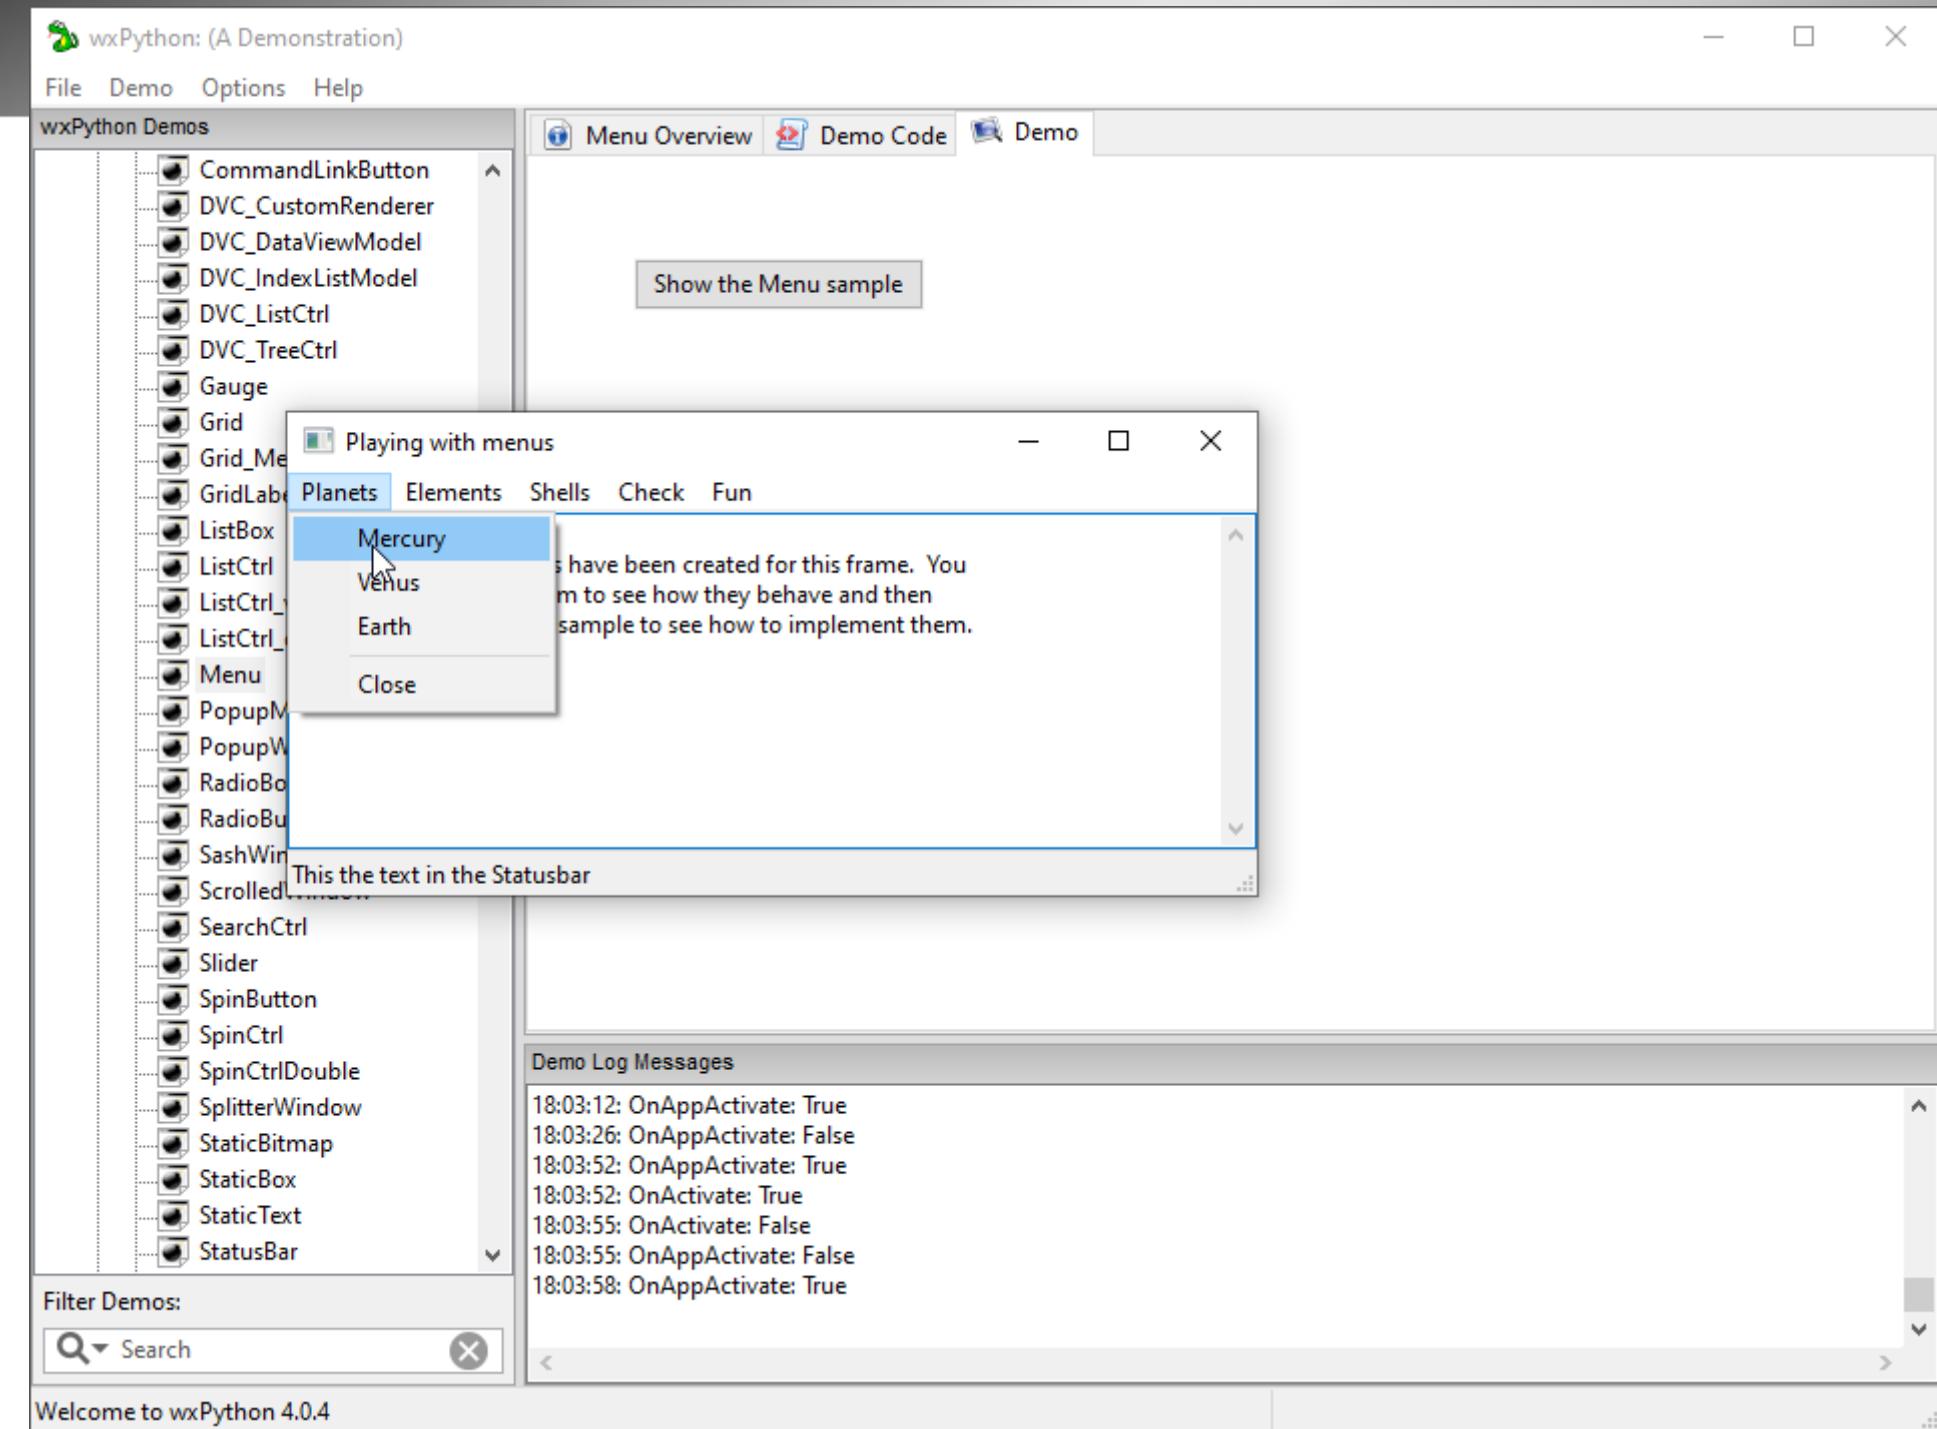

```
18:00:25: OnItemCollapsed: Window Layout
18:00:53: Loading demo Menu.py...
18:00:53: Running demo module...
18:00:59: OnActivate: False
18:00:59: OnAppActivate: False
18:01:13: OnAppActivate: True
18:01:13: OnActivate: True
```

At the bottom left, there is a "Filter Demos:" search bar with a magnifying glass icon and a "Search" button.

Gui mit wxDemo

Gui mit wxDemo

Gui mit wxDemo

The screenshot shows the wxPython Demo application window. The title bar reads "wxPython: (A Demonstration)". The menu bar includes File, Demo, Options, and Help. A sub-menu "wxPython Demos" is open, listing various wxPython controls with icons: CommandLinkButton, DVC_CustomRenderer, DVC_DataViewModel, DVC_IndexListModel, DVC_ListCtrl, DVC_TreeCtrl, Gauge, Grid, Grid_MegaExample, GridLabelRenderer, ListBox, ListCtrl, ListCtrl_virtual, ListCtrl_edit, Menu, PopupMenu, PopupWindow, RadioBox, RadioButton, SashWindow, ScrolledWindow, SearchCtrl, Slider, SpinButton, SpinCtrl, SpinCtrlDouble, SplitterWindow, StaticBitmap, StaticBox, StaticText, and StatusBar.

The main area displays Python code for creating a menu bar:

```
22     check the source for this sample to see how to implement them.  
23     """ , style=wx.TE_READONLY|wx.TE_MULTILINE)  
24  
25     # Prepare the menu bar  
26     menuBar = wx.MenuBar()  
27  
28     # 1st menu from left  
29     menul = wx.Menu()  
30     menul.Append(101, "&Mercury", "This the text in the Statusbar")  
31     menul.Append(102, "&Venus", "")  
32     menul.Append(103, "&Earth", "You may select Earth too")  
33     menul.AppendSeparator()  
34     menul.Append(104, "&Close", "Close this frame")  
35     # Add menu to the menu bar  
36     menuBar.Append(menul, "&Planets")  
37  
38     # 2nd menu from left  
39     menu2 = wx.Menu()  
40     menu2.Append(201, "Hydrogen")  
41     menu2.Append(202, "Helium")  
42     # a submenu in the 2nd menu  
43     submenu = wx.Menu()  
44     submenu.Append(2031, "Lanthanum")  
45     submenu.Append(2032, "Cerium")
```

Below the code, a "Demo Log Messages" panel shows the following log entries:

```
18:04:08: OnAppActivate: False  
18:04:37: OnAppActivate: True  
18:04:40: OnActivate: True  
18:04:52: OnActivate: False  
18:04:52: OnAppActivate: False  
18:05:01: OnAppActivate: True  
18:05:01: OnActivate: True
```

The status bar at the bottom says "Welcome to wxPython 4.0.4".

Welcome to wxPython 4.0.4

Gui mit wxDemo

... (zusätzlich im Konstruktor)

```
### Label (StaticText) und TextCtrl  
self.label1 = wx.StaticText(self, -1, "Ein/Ausgabe")  
self.label1.SetPosition((155, 15))  
self.textCtrl1 = wx.TextCtrl(self, -1, "noch ohne Inhalt", size=(205, -1))  
self.textCtrl1.SetPosition((155, 45))  
self.Bind(wx.EVT_TEXT, self.EvtText, self.textCtrl1)    # sinnvoll?
```

... (zusätzlich in Ereignisbehandlung)

```
### Ereignisbehandlung  
### TextCtrl  
def EvtText(self, event):          ## (so noch nicht sinnvoll)  
    print('EvtText')
```

... (siehe vorige Code-Folie)
